

FPSO & SURF Lifecycle

We connect it all together

At Oil States, we understand you are facing more than just the typical FPSO/SURF challenges. This has encouraged us to re-look at how we approach projects, operations efficiencies, cost reductions and more.

We provide enabling technology to meet FPSO/SURF challenges and bridge current gaps in the industry across the FPSO/SURF lifecycle for concept selection, vessel build, installation, production and decommissioning.

FPSO & SURF Lifecycle

We connect it all together

Oil States supports you as you tackle the many new challenges in today's environment, such as an increased focus on timing and economics of project justification, the growing importance of delivering projects on-time and under AFE and the essential need to operate safely while maintaining the integrity of your assets.

Installation

Whether spread or turret moored, Oil States supports FPSO operators, EPIC and SURF companies to secure the vessel and connect production through our integrated solutions, topside to subsea.

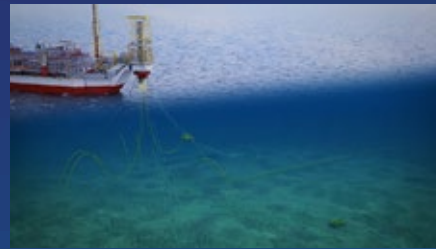

Field Life Extension

Avoid unplanned shutdowns with proactive asset integrity management and extend asset life with vessel modifications and upgrade services through to end-of-life decommissioning programs.

Concept Selection

Oil States can help with upfront planning and thorough evaluation of concept cost/benefits through our independent engineering design consultancy who specialize in global riser and mooring analysis.

Production & Operations

Oil States assists FPSO operators to dramatically influence OPEX costs and operational efficiency through our lifting and handling systems, compact valves and proprietary Merlin™ technology.
